

## ADSS cable anchoring clamp,PA-700 /PA-701

### Product information:

ADSS cable anchoring clamp PA-700/701 either called ADSS tension clamp was designed to tension and anchor 6-12mm diameter all dielectric self-supporting cable during outdoor aerial FTTx line constructions.

### Technical specification:

Product code	ADSS cable size, mm	MBL, kN	Material	Wire bail
PA-700	6-10	3	UV resistant polymer, stainless steel wire	Standard Φ 2.5mm, 350mm length
PA-701	8-12	3	UV resistant polymer, stainless steel wire	Standard Φ 2.5mm, 350mm length

This wedge type anchor clamp is consists of main body, wedges, thimble, plastic insert, 2.5mm stainless steel bail wire, aluminum bail head. All the plastic parts are made of UV resistant plastic which processed by injection technology and aluminum bail head was processed by CNC machine which is available in Jera workshop.

The installation of this ADSS anchor clamp is very simple, no need additional tools. Plastic self-adjusting wedges are enough to keep the ADSS cable in tight strength position. And our wedge were designed not to damage cable sheath during installation and application. Open type wire bail also help easy installation on pole bracket or hook.

We provide a whole solution for outdoor and indoor FTTx deployment. We have competitive price and stable quality of fiber optic cables, tension clamps, fiber optic termination boxes, fiber optic splice closure, dead end guy grips, pole bracket, hook, [cable slack storage](#) and etc.

Feel free to contact us for more information about this fiber optic tension clamp price.
